Professional Summary

Third-year BCA student at Srinivas University with hands-on experience building Python applications, backend APIs, database-driven systems, and interactive web applications. Worked with Python, FastAPI, SQL, PostgreSQL, MySQL, and JavaScript across academic and personal projects. Also experienced with Git, Docker, GitHub Actions, and AWS EC2 through a containerized application and CI/CD project. Looking to contribute to software development teams while building practical experience in designing, developing, and maintaining applications.

Education

Srinivas University – ICIS
Bachelor of Computer Applications (BCA) *Mangalore, Karnataka*

Technical Skills

Programming: Python, Java, C, C++, JavaScript
Backend Development: FastAPI, REST APIs, SQLAlchemy
Frontend Development: HTML, CSS, JavaScript
Databases: PostgreSQL, MySQL, SQL
Python Technologies: Tkinter, Streamlit, Plotly
Tools and Platforms: Git, GitHub, VS Code, Docker, GitHub Actions, Trivy, AWS EC2

Projects

CloudAttend – Attendance Management System | *Python, FastAPI, PostgreSQL, JavaScript* GitHub

- Developed a web-based attendance management application with separate student and teacher dashboards.
- Built backend APIs using FastAPI and SQLAlchemy with PostgreSQL to manage student, teacher, class, batch, schedule, and attendance data.
- Implemented attendance session management, attendance record retrieval, and teacher-related attendance operations through API endpoints.
- Connected frontend pages built with HTML, CSS, and JavaScript to backend services and documented local setup and project limitations.

Smart City Air Quality Monitoring System | *Python, MySQL, Streamlit, Plotly, OpenWeather API* GitHub

- Built a Python data collection script to retrieve weather and air quality information using the OpenWeather API.
- Used MySQL to store collected readings and support historical data retrieval.
- Developed an interactive Streamlit dashboard with Plotly charts to display pollution measurements and historical trends.
- Implemented email alerts for unhealthy air quality conditions.

Python CI Pipeline and AWS EC2 Deployment | *Python, Docker, GitHub Actions, Trivy, AWS EC2* GitHub

- Containerized a Python application using Docker to create a consistent application environment.
- Configured GitHub Actions to automate application testing and Docker image builds.
- Integrated Trivy into the CI workflow to scan container images for known security vulnerabilities.
- Deployed the application on Amazon EC2 and verified that it ran successfully.

Food Billing System | *Python, Tkinter* GitHub

- Developed a desktop billing application using Python and Tkinter with a graphical user interface.
- Implemented item selection, quantity management, automatic bill calculation, receipt generation, and transaction file handling.

Certifications and Training

- **Python Certification – freeCodeCamp (2025)** – Completed Python programming coursework.
- **AWS Builder Labs Learning Plan (2026)** – Completed hands-on AWS cloud learning labs.
- **Fundamentals of Architecting on AWS (2026)** – Completed foundational AWS architecture training.

Achievement

- **Second Prize – College Hackathon (2025):** Secured second place in a hackathon conducted by the MCA Department, collaborating with a team to develop and present a technical solution.
